PROFESSIONAL SUMMARY

Backend-focused Full Stack Developer with 4 years of experience building REST APIs, web platforms, and cloud infrastructure for clients in logistics, e-commerce, HR tech, and enterprise services. Strong in Node.js, NestJS, TypeScript, Python, PostgreSQL, and AWS (EKS, Kubernetes, S3), with hands-on experience operating large-scale production systems of 8–10 TB of data and 420M+ stored documents. Builds AI-powered features end to end: LLM agents with LangChain and LangGraph, RAG pipelines, natural-language search, and process automation with n8n.

WORK EXPERIENCE

Full Stack Developer — Proficient Enterprises

August 2025 – Present · Cheyenne, Wyoming, USA · Remote

- Led the production migration of a large-scale platform from Docker Compose to Kubernetes on AWS EKS (Helm) and from MySQL to PostgreSQL, covering 8–10 TB of database records and 420M+ documents stored in Amazon S3.
- Built an AI logistics assistant for a trucking company: a chatbot that answers natural-language questions about trucks, container shipments, loads, and their assignments, backed by n8n workflows that automate operational processes.
- Developed an AI contract search tool with natural-language queries and automatic document summarization, using RAG pipelines with LangChain, OpenAI embeddings, and pgvector.
- Built an AI-powered resume screening platform for HR teams, including Mercado Pago payment integration.
- Designed and built REST APIs in Node.js/NestJS and Python for two e-commerce platforms (B2C retail and B2B wholesale) and a training booking and workout routine system integrated with WhatsApp.
- Developed React/TypeScript dashboards for shipment tracking, public tender monitoring based on web-scraped data, case status tracking, and document search and reporting.
- Automated lead generation with n8n and web scraping, collecting prospect contacts and running automated email campaigns.
- Resolved a critical production incident caused by uncontrolled table growth (7GB+), tuning Spring Batch jobs and HikariCP connection pooling to restore database performance.
- Implemented SSO and identity management with Keycloak integrated with Active Directory (OAuth2/JWT) across internal applications, including the Alfresco document management platform; optimized Aurora RDS queries and managed OpenSearch and EC2 resources.

Full Stack Developer — ConoSurIT

October 2022 – August 2025 · Córdoba, Argentina · Remote

- Developed and maintained enterprise web applications for document and case management with Angular, Node.js, and PostgreSQL, serving corporate clients in Argentina and Chile.
- Migrated a monolithic backend to a microservices architecture, improving modularity and scalability.
- Improved application performance by ~40% by refactoring component architecture and introducing lazy loading.
- Built REST APIs and backend integrations for document storage, retrieval, and search, including a search platform for a major Chilean social welfare institution.
- Acted as technical reference for the development team, coordinating sprint tasks and reviewing implementation decisions.

TECHNICAL SKILLS

Backend: Node.js, NestJS, Express.js, Python, REST APIs, Microservices, Web Scraping

Frontend: TypeScript, React, Next.js, Angular

Databases: PostgreSQL, MySQL, MongoDB, Aurora RDS, pgvector, OpenSearch

Cloud & DevOps: AWS (EC2, S3, EKS, RDS), Kubernetes, Helm, Docker, CI/CD, GitHub Actions, Linux

AI & Automation: OpenAI API, LangChain, LangGraph, RAG, AI Agents, Semantic Search, n8n

Integrations & Security: Keycloak, OAuth2/JWT, SSO, Active Directory, Mercado Pago, WhatsApp, Alfresco

EDUCATION

Bachelor's Degree in Software Development Analysis — National University of Patagonia (UNPSJB) · 2015 – 2019

LANGUAGES

Spanish — Native · English — Upper-Intermediate (B2)
